

She has my eyes
and my smile.

Will she also have
my type 1 diabetes?

“Because I have type 1 diabetes, my daughter is at risk. That’s why I had her screened through TrialNet. If type 1 diabetes is in your family, I encourage you to get the rest of your family screened.”

— Miss America 1999 Nicole Johnson, with daughter Ava

A SIMPLE BLOOD TEST COULD DETECT AN INCREASED RISK FOR TYPE 1 DIABETES UP TO 10 YEARS BEFORE SYMPTOMS APPEAR. Being tested is important because if you are at increased risk, you might be eligible to join research studies that are testing ways to prevent and delay type 1 diabetes.

As part of an international research effort led by the National Institutes of Health, diabetes researchers at more than 150 TrialNet locations are offering this test to eligible family members of people with type 1 diabetes.

To learn more, call 1-800-425-8361 or visit www.DiabetesTrialNet.org.

Type 1 Diabetes TrialNet, a global network of researchers dedicated to the study, prevention, early detection and early treatment of type 1 diabetes, is supported by:

Type 1 Diabetes Screening

Camp Kno-Koma
Check-In
Sunday, July 12
